- 1. BEAUREGARD**
Heavy Yields

1. Developed by Louisiana Agricultural Experiment Station, this copper skinned potato has a moderately orange flesh, and is consistent in shape. The plant is tolerant to soil pox and out-yields all other sweet potatoes. Does not crack. Yields 400-500 bushels per acre. Good cash crop. Resistant to white grubs and soil rot. Susceptible to root knot nematode. 90+ days (Vine Type.)
- 2. GEORGIA JETS**
Heavy Yields

2. Remarkable hardiness. The Georgia Jet is great for our northern neighbors. It has a rose petal skin that truly stands out in the field and a light orange meat. Excellent baker. Great for truckers and peddlers. Matures about 90+ days with normal rainfall. (Vine Type.)
- 3. ORLEANS**
"New" Heavy Yields

3. Developed at LSU. Orange flesh, rose skinned cultivar. Similar to the Beauregard. Disease resistance about the same. With good shapes, and high yields, it will out perform the Beauregard for "Baker-size" potatoes. Vine-type, about 100 days to maturity.
- 4. VARDAMAN**
Heavy Yields

4. A delicious eating potato, the Vardaman has light orange skin, deep orange flesh, and no strings. It is a heavy yielding bush-type, which makes it an ideal choice for small garden spaces. Matures in 100+ days. (Bush Type)
- 5. CENTENNIAL**
Moderate Yields

5. Bred at Louisiana Agricultural Experiment Station at Baton Rouge in 1962, the Centennial has an orange smooth skin, yields heavy in a normal year. Great for truckers and peddlers. Good grade of potato. Also has tolerance to fusarium wilt and internal cork. Stores well. About 90+ days. (Vine Type.)
- 6. BUNCH PORTO RICO**
Moderate Yields

6. The Bunch Porto Rico has a light yellow to gold colored skin at harvest time, a cream to orange meat. is a good eating, baking and cooking potato. Plants have purple stems. Ideal for gardens with small space. About 100+ days. (Bush Type.)
- 7. NANCY HALL**
Moderate Yields

7. Grandpa's favorite. An old standby from the 1800's. The Nancy Hall has a cream skin and cream/yellow inside. Delicious after being cured in storage. Sweet and tasty. White milk flows after slicing open. A real oldtime favorite. Normal maturity around 110 days. Keeps very well. Ol' timey flavor. (Vine Type.)
- 8. WHITE TRIUMPH**
Moderate Yields

8. The White Triumph has a tan skin and snow white meat with a smooth outside and shaped nicely and cooks very well. 90-100 days maturity. Sweet and dryer after curing. About 110 days. (Vine Type.)
- 9. RED JAPANESE**
Moderate Heavy Yields

9. A red/purple skin, and ivory flesh the Red Japanese is bred for the Asian market. High dry matter but sweet. Resists fusarium wilt, susceptible to soil rot, root knot, nematode, susceptible to russet crack. Matures 110 days. (Vine Type.)
- 10. HERNANDEZ**
Moderate Heavy Yields

10. Developed at Louisiana Agricultural Experiment Station in 1992, the Hernandez has a beautiful deep orange meat and bright orange skin. Uniform in shape and size. About 100 days. (Vine Type.)
- 11. DIANE**
Heavy Yields

11. Diane is a heavy producer with dark red smooth skin and deep orange flesh. Diane is a premium of all sweet potatoes. 90-100 days. (Vine Type.)
- 12. O'HENRY**
Heavy Yields

12. The O'Henry is a mutated Beauregard variety with white flesh and cream skin. The plant grows like Beauregard, good storage and tasty. Excellent size. 90-95 days. (Vine Type.)
- 13. PURPLE PASSION**
Moderate Heavy Yields

13. Named for its purple skin and meat, this potato is very smooth and uniform and is great for the Asian market. The plant yields well in medium dry conditions and is tolerant to many diseases. About 100 days. (Vine Type.)
- 14. YELLOW JEWELL**
Heirloom

14. Developed by North Carolina State University, the Yellow Jewell has a copper-colored skin and moist bright orange flesh, is great for baking and steaming. With a chunky root, the Yellow Jewell is resistant to fusarium wilt, southern root, knot nematode, internal cork and sweet potato beetle. Matures in 100+ days. (Vine Type.)
- 15. MURASAKI**

15. A popular sweet potato of Japanese origin, dark purple skin, and white flesh that turns a champagne color when cooked. It has a sweet-nutty flavor with a drier, creamier texture than their orange-fleshed counterparts. Matures in 100-120 days. (Vine type.)
- 16. OKINAWAN**
New Variety
Low Yielder

16. Light tan skin with varying amounts of purple flesh, ranging from almost solid purple to almost solid white. Matures in 120 to 140 days in TN. Oki's are a super food packed with high antioxidants and fiber. Dense, dry, and slightly sweet best when wrapped then baked slow @ 400 deg. 1-1/2 hrs. for a creamy texture.
- 17. CAROLINA RUBY**
Heavy Yields

17. Developed by Dr. Wanda Collins at N.C.S.U., the Carolina Ruby has a red skin similar to the old Rose Centennial with a dark orange meat. The plant resists fusarium wilt, soil rot, but susceptible to root knot nematode. Great for production in northern climates. 90-100 days. (Vine type.)
